proof. | AI Assistant

Answer your customers, even after you close.

An AI assistant on your website and WhatsApp, live in 15 days. It answers questions, books appointments and keeps your CRM up to date, and it hands off to you when a person should step in.

Price
$3,999
Half to start, half when you approve the test.

Timeline
15 days
Kickoff on day 0. Live on day 15.

Our promise
On time.
If we're late, even by an hour, your first six months of AI Care are free.

The clock pauses while we wait on your approvals, or on outside companies like Meta. Free Care covers our fee; AI and messaging costs stay on your own accounts.

What the assistant does

Where it talks	Your website chat and WhatsApp. Text messages too, once US carriers approve your number.
What it knows	Your services, prices, policies and FAQs, taken from your documents and site.
What it handles	Answers questions, sorts real leads from browsers, books appointments and updates your CRM.
What it connects to	Your CRM and up to two other tools you already use.
What you see	A simple dashboard with every conversation. You can step in at any time.
How it behaves	It tells people it's an AI assistant, and hands the conversation to your team when someone asks for a person or it isn't sure.

How the 15 days go

Day 0
We talk.
Kickoff call, account access, your documents, and we apply for WhatsApp approval with Meta.

Day 7
We test it together.
The assistant answers real questions from your business, with you watching.

Day 15
It goes live.
Your customers can start talking to it.

It's yours

The assistant's setup and everything it knows. The AI and cloud accounts are in your name.

After launch

AI Care, $450/month Keeps the assistant running, checks its answers, and updates what it knows.

AI and messaging costs are billed to your own accounts, with spending alerts so there are no surprises.

Need something we don't list here?

Tell us what you're working on, and we'll set up a call. ■
